

Project Title

Mobile Store (Online Store web- application)

Description

The primary goal of the project is to create a mobile store application that users can view a variety of smartphones, tablets, and accessories from different brands. Each product will have detailed information such as specifications, features, price, customer reviews, and availability. Users can select products they want to purchase and add them to their shopping cart. Once users are ready, they can proceed to checkout, choose a payment method, and complete their purchase online.
